Session 7: COVID-19 Community Transmission and Nursing Home Screening Strategies

Key Takeaways:

- Focus on prevention and keeping COVID-19 out of Nursing Homes. Understand the relationship between increased rates of COVID-19 community transmission (case rates) and the increased risk of COVID-19 spreading to nursing home staff and residents.
- Careful screening may help limit COVID-19 spread. Educate staff members, residents, visitors on the risks of asymptomatic individuals bringing COVID-19 into the nursing home when they are still contagious.
- Having leaders visible in designated screening areas and supporting staff training on proper screening protocols promotes accountability for identifying and managing risks related to COVID-19.

The following question set can be used to facilitate discussions and reveal opportunities across and within key members of interprofessional teams, residents and visitors. Please consider using/adapting them in your next huddles or team meetings.

Questions by Content	
Integrate screening protocols into overall infection prevention and management plan	Are screening protocols for staff members, non-essential workers or contractors/vendors, visitors, and residents detailed in the Infection Prevention and Control Program (IPCP)? Are there written communication materials (e.g., flyers) to inform everyone entering the nursing home about required screening protocols and potential restrictions?
Documenting and Reporting Screening Results	Is there a process in place for documenting all screening activities (e.g., individuals screened, responses to screening questions, temperature, action/s taken if screen is positive)? Are screening results compiled and results reported to leadership?
Follow-Up Plan (monitoring over time)	Is there a COVID-19 Team or Task Force that reviews screening results, actions taken, documentation on a regular basis? Are updates/changes to processes and systems made in a timely manner and shared with relevant stakeholders?
Improvement Concepts	Is the IP or designee in regular communication with local (e.g., municipal or board of health) officials to learn about any additional updates to community transmission/case rates? Does the IP ask staff members (particularly direct care workers) and visitors for feedback on what would improve the screening process?
Critical Questions for Leadership	
Key Concepts by Stakeholder Grou	Is there evidence that the IP or appropriately trained designee is following nursing home protocols for screening and visitation? Do all relevant staff state that they have a basic understanding of screening processes?
What do Medical Directors Need to	Medical directors must be familiar with nursing home policies on immediate actions when a staff
know and discuss with the team?	member screens positive (don a mask if not wearing one, leave the nursing home, contact healthcare provider). Medical directors must meet or speak regularly with the IP, DON, Administrator and the nursing
	home's COVID-19 Team or Task Force to review and update screening policies, particularly if/when rates of COVID-19 community transmission change.
What do DONs and nursing supervisors need to know?	DONs must have contact information for individuals at the state department of public health and/or local boards of health who can answer questions about COVID-19 screening in nursing homes in that city/town or state. DONs must have a system for assessing and monitoring staff knowledge and skills related to COVID-19 screening and actions to be taken if someone screens positive.
What does the interprofessional team need to know?	Team members must know how to recognize potential signs/symptoms of COVID-19 and how to report and document (to whom and how soon). Teams must demonstrate open, frequent, supportive communication across and within departments and between point-of-care (direct care) workers and leadership/administration. Team members (all departments) must be able to describe immediate actions to take if a new or suspected case of COVID-19 is identified through screening or other means of detection. Team members must consistently and reliably demonstrate that they document and report any concerns to their supervisor or leadership in a timely manner.
