

Where  
there's  
smoke,  
there could  
be cancer.

Recent studies show that long-term, heavy smokers who have yearly low-dose screening CT scans have a 20% lower risk of dying from lung cancer than individuals who have standard chest x-rays.

If you are age 55-77, a former or current heavy smoker and concerned about your risk of lung cancer, talk to your doctor about a lung cancer screening CT at VCU Health.

**To find out if a lung cancer screening CT is right for you,  
call our Lung Screening Navigator at (434) 774-2541.**
